

# Move nodes

If you want the nodes to be in a different location in the diagram, you can easily move them by doing the following:

1. Open an asset page.
2. Click **Traceability > Diagram**.  
Wait for the default diagram to render.
3. If necessary, [change the view](#) or the [layout](#).
4. Click a node and hold down your mouse button.
5. Move the node to where you want in the diagram and release the mouse button.

Note that you cannot save the view with these changes. You can, however, print the diagram with these changes.
