

Display a preview in a diagram view

As you are designing a view, you can already see a graphical representation of the view by switching to the 'Diagram' tab. On this tab, you can see diagram-level setting at the top: the default layout, whether edge labels will be shown or not, whether duplicates are allowed or not.

You can also preview details of individual edges and nodes.

Follow these steps to display a preview of a node or edge while you are designing a view.

1. Open an asset page.
2. Click **Traceability > Diagram**.
Wait until the diagram has rendered.
3. Click  **> Properties**.
4. Click the **Diagram** tab.
5. Click on a node or an edge.
The preview of the selected object is displayed on the right.

Traceability > Diagram
